K.P.L. 3 FLEXIBLE FLOATATION COLLAR

A new design of Flexible Floatation collar from K.P.L. Products.

A new design of floatation collar has been developed to improve, not only the visibility and buoyancy of the unit, but also the method of fixing and securing its location to the flexible hose.

GREATER VISIBILITY

To enhance the visibility of the collar two florescent stripes have been sewn across the outer surface of the Dayglow orange material. These are highly visible in dark and dusky weather, especially when a light is shone in their direction.

SECURE FIXING

To secure the Floatation Collar onto the hose, various fixing methods have been used.

- 1) Two internal straps complete with adjustable plastic buckles have been introduced and sewn onto the inner surface of the collar,
- 2) On the outer surface of the collar, a further set of straps have been sewn, again with adjustable plastic buckles. This fully encapsulates the inner buckles and resists any movement of the collar along the length of the hose.
- 3) Brass eyelets at both ends of the collar, complete with tie cords, ensures there will be no movement once the collar has been positioned.

Hose Diameter Internal	Width	Length	Nett Buoyancy Weight
2" (50 mm)	440 mm	600 mm	8/9 kgs
3" (75mm)	550 mm	680 mm	12 kgs
4" (100mm)	730 mm	700 mm	17 kgs
5" (125mm)	860 mm	800 mm	28kgs
6" (150mm)	950 mm	1000 mm	30 kgs
