K.P.L. 1 FLEXIBLE FLOATATION COLLAR

K.P.L. Floatation Collars are specifically designed to wrap around a flexible hose. The collar allows sufficient buoyancy and acts as a preventative safety measure to keep the hose away from the ships propellers.

The flexible material enables the collar to bend, following the natural curve of the hose when various products e.g. Diesel, Cement, Drilling Mud, Baryte, Drinking Water and oil based products are being transferred from ship to shore or ship to rig. The collars are designed to store in flat - pack form (ideal where space is minimal)

The bright 'dayglow orange' double nylon based material is both highly visible and extremely hard wearing. The collar is then reinforced with double nylon stitching and the inner floatation material is encapsulated into a series of pockets. A lace cord threaded through the brass eyelets secures the collar and also determines its position along the length of the hose.

Hose Diameter Internal	Width	Length	Nett Buoyancy Weight
2" (50 mm)	440 mm	800 mm	8/9 kgs
3" (75mm)	512 mm	800 mm	12 kgs
4" (100mm)	815 mm	1100 mm	17 kgs
5" (125mm)	815 mm	1083 mm	28kgs
6" (150mm)	958 mm	1083 mm	30 kgs
8" (200 mm)	1200 mm	1200 mm	30 kgs
